Goals
Scope/Timeline
Study Area

This report was prepared on behalf of the Town of Barnstable through a "Massachusetts Downtown Initiative Technical Assistance Program" competitive grant from the State Department of Housing and Community Development (DHCD).

Town staff provided oversight and review of the wayfinding plan and final report. In addition, Town businesses, residents, visitors, and employees provided insight and input into this study through a series of stakeholder meetings.

On behalf of DHCD and the Town of Barnstable, the study team would like to thank all stakeholders and participants for their constructive inputs to this process.

# Introduction

## **Showing Hyannis the way**

Hyannis has long been perceived the "hub of the Cape," attracting visitors from the region and across the country who want to experience its history, vitality, and seaside charm. There are many popular destinations in the downtown area, including a bustling Main Street with dozens of dining and shopping options. People use a variety of modes to visit Hyannis, including ferries, and each has unique needs for supporting visitors with navigation once arriving.

Currently, there is a wide range of styles and systems for the Downtown's existing wayfinding signage, which have been layered upon each other over time. This has resulted in an overly complicated and confusing system that 1) doesn't capture visitors at the appropriate locations to help them navigate to popular destinations (particularly regarding public parking facilities), 2) lacks clarity and consistency in which destinations are featured on signage and how they are identified, and 3) doesn't speak to a distinct visual brand or identity that is unique to Downtown Hyannis.

The Town of Barnstable applied for technical assistance provided by Stantec through the Department of Housing & Community Development (DHCD). The assistance included developing a wayfinding plan to kickstart a longer-term goal of completely rehauling the downtown's wayfinding signage system. This plan is intended to provide short-term signage solutions

as early as summer 2022, with the expectation that a more permanent appoach and more comprehensive planning and public engagement process for signage will take place in the future.

With the understanding that the Town intends to completely replace all existing (Town-owned) signage, the tasks for this specific plan include:

- Conducting an inventory of all existing signage
- Identifying "gaps" in existing sign types based on the destinations the signs are intending to direct to and the logical navigation points of different mode users
- Investigate how existing signage might be blended to inform one, common brand/ style
- Develop a recommended signage inventory and specifications
- Develop specification drawings for two (2) signage design options that could be fabricated immediately following the plan

At the initiation of this project, the Project Team composed of staff from the Town's Planning & Development Department, the Hyannis Main Street Business Improvement District (BID), and local stakeholders identified a set of goals that they hoped to achieve throughout the wayfinding plan process.

# **PROJECT GOALS**

- Establish an inventory of existing signage to help inform future wayfinding needs and priorities
- Better direct visitors to key destinations downtown
- Improve visibility of and connectivity to/between parking areas
- Create a sense of arrival for visitors using various modes of travel
- Develop a strategy for integrating or improving the unity of existing wayfinding with new approach
- Create a brand and signage system that is reflective of Hyannis Main Street's character and highlights unique neighborhoods or areas

# **Technical Assistance Tasks**

# **Anticipated Outcomes of this Effort**

- Develop up to (2) preliminary design options for each of the following sign categories:
  - Gateway
  - Directional (for vehicles and pedestrians)
  - Identification
  - Information

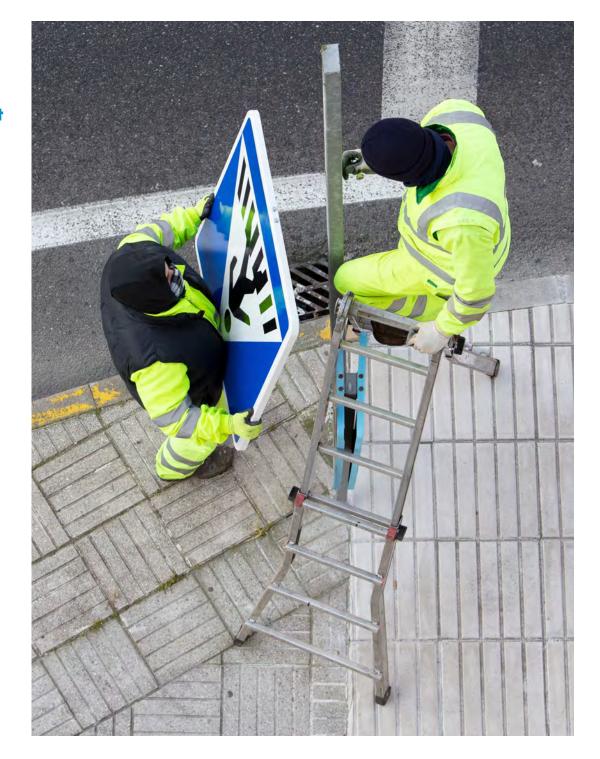

which can be further customized or can inform potential future (permanent) sign designs

- Prepare concept-level files ready for sign fabricator to develop/finalize/print for standard metal signs on posts
- Identify recommended signage locations to address the navigation needs for prioritized destinations

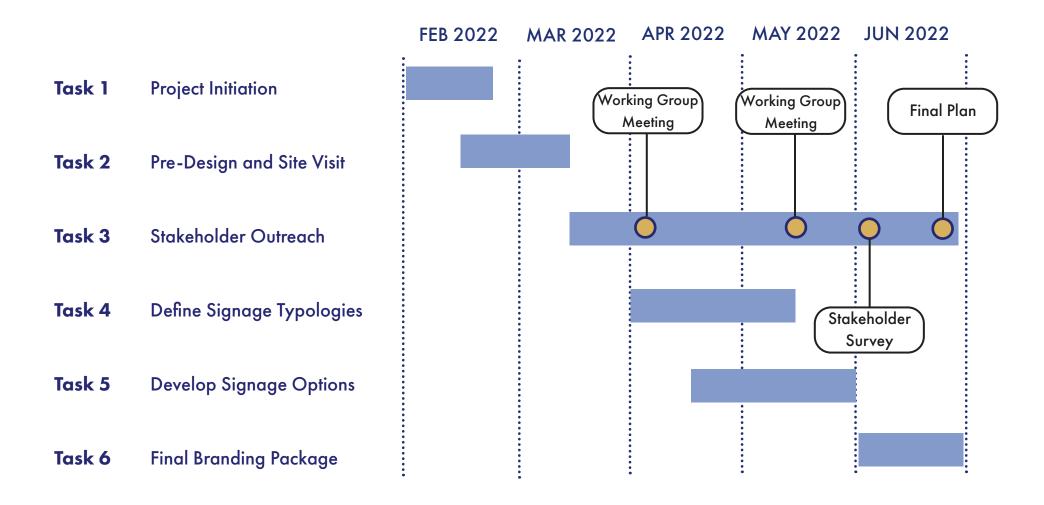

# Potential Future Outcomes Beyond this Effort

- Execute a comprehensive branding and marketing strategy with an enhanced public engagement process
- Develop a comprehensive signage suite of many options
- Design complex signage options that incorporate special materials

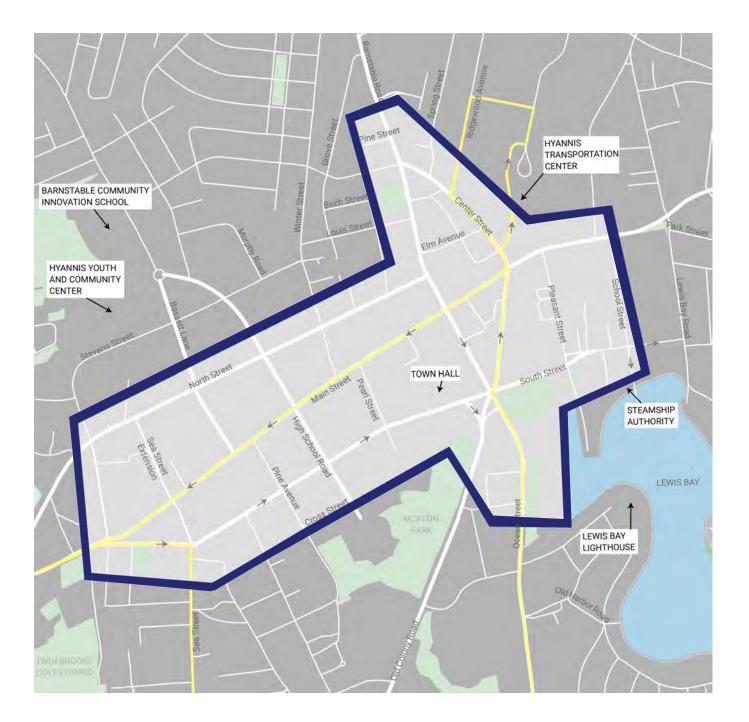

# **Project Timeline**

# Project Boundary

The Project Team identified the boundary for the Wayfinding Plan to encompass the downtown area, including the natural extent of the denser commercial areas at the east and west ends of Main Street, the two blocks north along Barnstable Road as the gateway into downtown, and the area along Ocean Street to the Hy-Line ferries, as the waterfront link to the downtown.

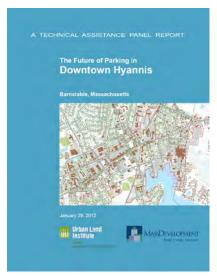

Although the signage inventory and other analysis was conducted mostly within this boundary, the consultants recognized there were wayfinding needs beyond the boundary to better support navigation to downtown Hyannis. These areas have been identified in later sections of analysis and recommendations in this document.

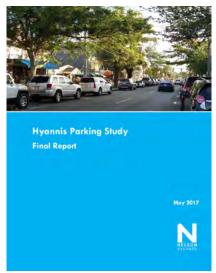

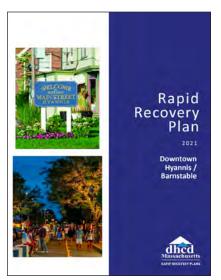

# Project Precedents

# **Building on previous efforts**

The Town of Barnstable has been very active in recent years, with several plans and projects identifying data and recommendations which crossover with some of the intents of this wayfinding plan. Some of the key recurring plan themes have been identified below.

**Table 1.** Recurring community themes in recent planning efforts clearly highlight the Town's priorities.

# Introduction to Wayfinding

Wayfinding Signage Typologies

# Wayfinding Signage Typologies

# **Different Signs for Different Purposes**

Wayfinding signage can typically be categorized within the following four, general typologies. A few examples have been included for each category, but the options are truly endless for how signage might be designed.

Each typology has a unique function. Ideally, all four are designed to coordinate with each other in their general design as part of a cohesive overall wayfinding system.

# **GATEWAY**

## What it does-

Creates a sense of arrival (usually from a primary access route) and defines the boundary of a district or downtown (e.g., welcome sign)

# **IDENTIFICATION**

# What it does-

Identifies landmarks or other points of interest by name or symbol. It might include information about hours of operation, services provided, etc.

# **DIRECTIONAL**

### What it does-

Directs you toward a specific area or destination (such as key parking locations), typically with the use of arrows

# **INFORMATION**

#### What it does-

Provides information about where you are located in the context of an area (such as with maps in a visitor kiosk), or details about a destination (e.g., seasonal access, only)

#### **BEST PRACTICE-**

Principles of Wayfinding Signage

#### Be memorable-

Visual language should build on brand identity to drive economic growth

#### Be inclusive-

Stakeholders and the public should take part to create a sense of ownership

#### Be multimodal-

Improve navigation/safety for all types of travel and expand connections

#### Be scalable-

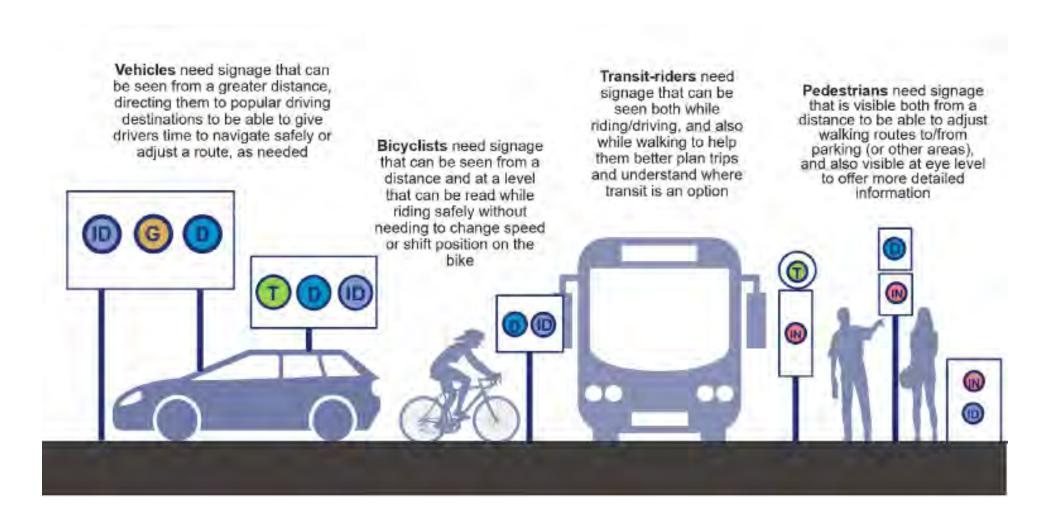

Have built-in flexibility as a kit of parts that can be tailored and used as the town grows and other signage needs change

#### Be planned-

Have a phased approach (including budgeting considerations) to reduce the time to achieving a fully installed and coordinated sign system

#### **Different Scales for Different Users**

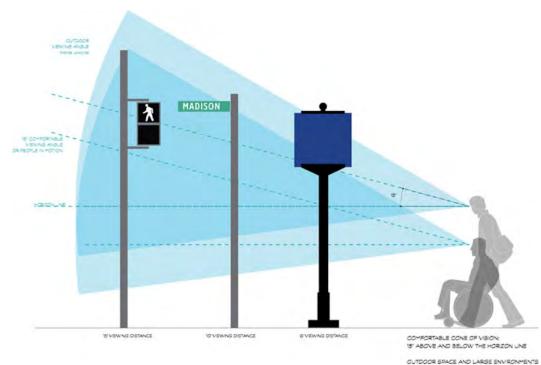

Within each of the four signage typologies, there may be a wide range of different sizes of signs. The graphic below demonstrates how different scales of signs should be used to help users of different modes navigate effectively and safely.

# **Making Signage Accessible for All**

The size of wayfinding signage is important for increasing its visibility but other considerations such as sign placement (height, positioning on a sidewalk, proximity to other street elements that might obstruct signs when viewed from a distance) should be considered as well to make sure that visitors of all mobility levels have clear sightlines of the signs.

- CONE OF VISION TRENDS UPWARDS (street signs, city wayfinding signs, dirport concourse sig

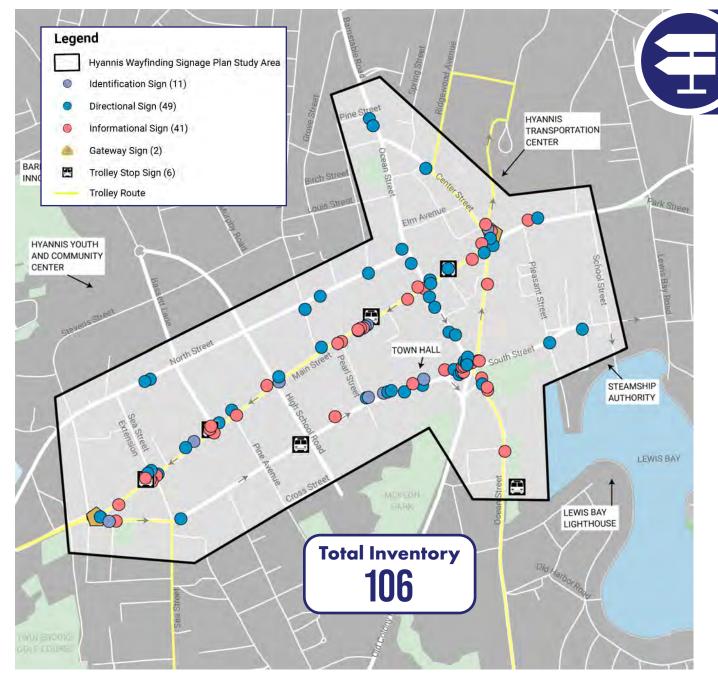

# 3

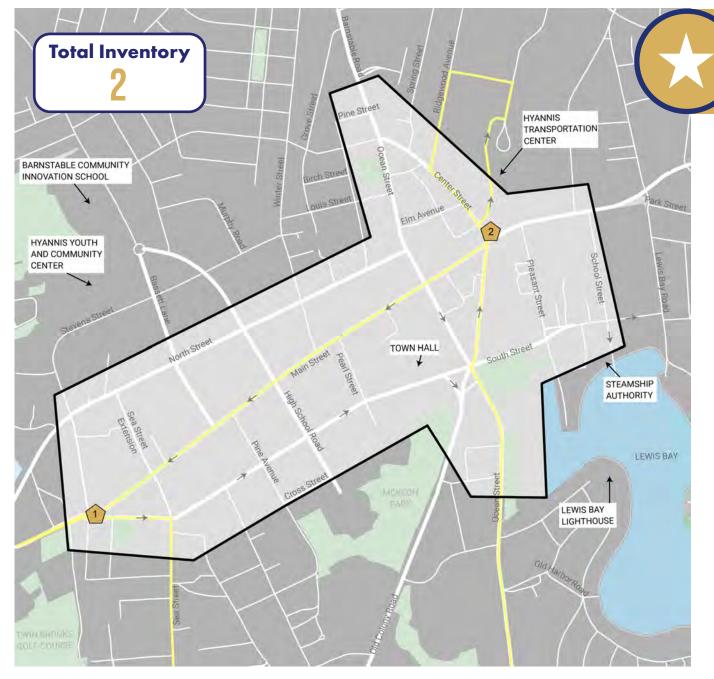

# **Existing Sign Inventory**

Overall Inventory Gateway Signs Directional Signs Identification Signs Information Signs Transit Signs

# Existing Signs-Overall

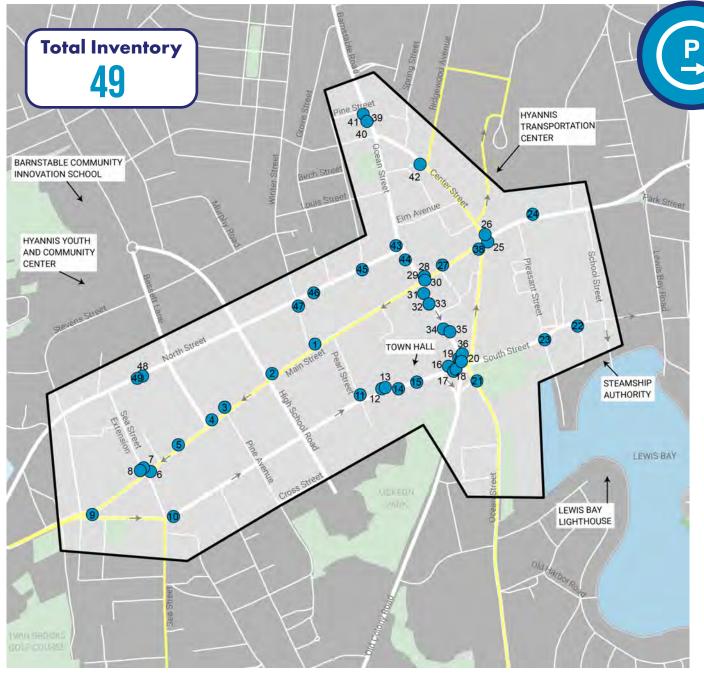

- There is no signage along eastbound traffic routes to draw people to Main Street
- Signage to/from pedestrian alleys is lacking or not visible from most areas within key parking lots
- There are several areas where several different sign types are clustered together. This causes confusion about destination ownership, identity, and creates visual clutter
- There are many instances where the font size of a sign is too small for the user it is intending to target
- Some parking directional signs are too simple and require further clarification about the type of parking available and whether it is paid, for example
- Other parking signs are too complex, with information about the lot being broken down into many small signs.
- Because of the many styles of signs, there is not a clear navigational identity associated with the Downtown

Existing Signs-**Gateway** 

- There is not an existing gateway sign to capture visitors arriving from the (likely) highest volume of origin- from the north
- The signs are in good condition
- The sign design is formal and is very different from the style of signs seen elsewhere in Hyannis

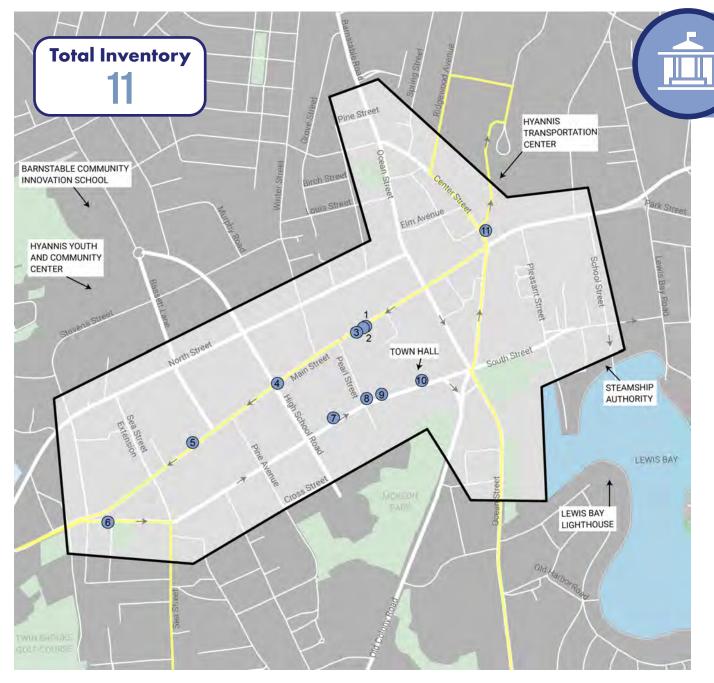

**Existing Signs-**

**Directional** 

- There are too many directional sign styles being used in the Downtown, which can be confusing to users
- Symbology is utilized on some of the sign styles but is confusing and inconsistent
- Multiple terminologies are being used for destinations (e.g. 'Waterfront' vs. 'Harbor')
- Some sign locations are not ideal for the destinations they are trying to direct to, and there are also gaps in signs needed for some locations

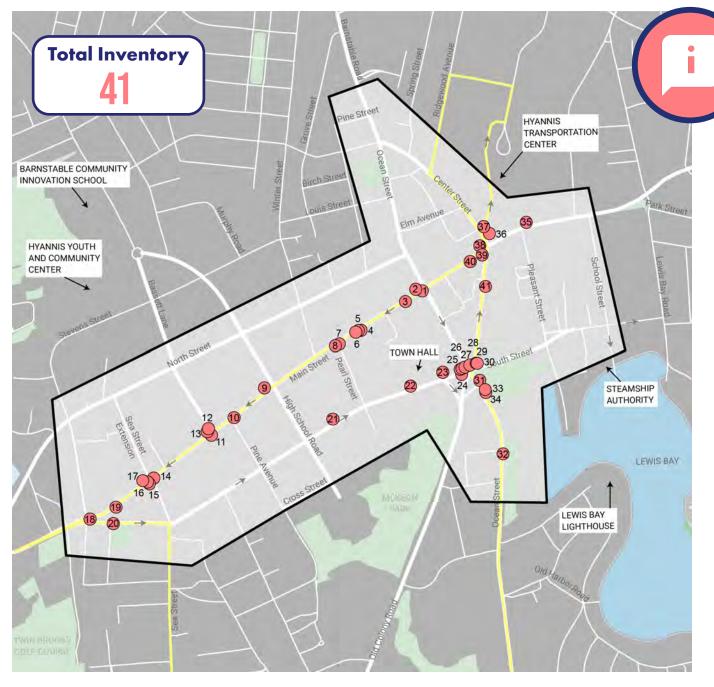

**Existing Signs-**

Identification

- There is varying levels of information included on the existing identification signs
- Some signs correlate to a specific brand or logo instead of being defined as a destination within Downtown Hyannis

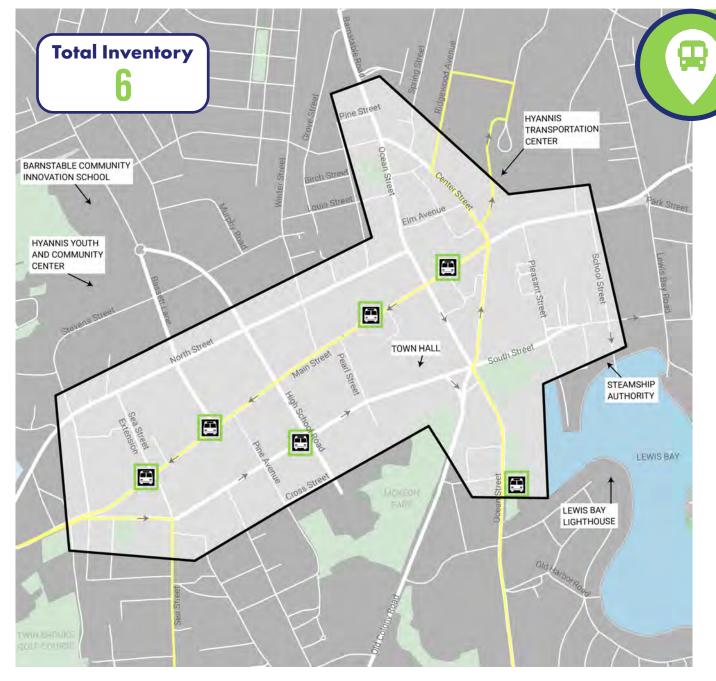

**Existing Signs-**

**Information** 

- Some of the information sign types like the kiosks above, are generally serving their purpose in providing detailed information at the pedestrian level
- The kiosks do not have a lighting element to make them usable at night

**Transit** 

**Existing Signs-**

- Signage does not provide essential information to unfamiliar riders about the service available (hours of operation, the route that the trolley follows, the frequency of a trolley passing, if there is a cost to ride, etc)
- Signage should direct people towards the trolley routes from other nearby popular points of arrival for visitors such as the North Street or Ocean Street parking lots.

# Community Engagement Community Engagement Community Engagement

Stakeholder Survey

# **Wayfinding Working Group**

# Balancing Best Practices and Preferences to Achieve Places

To gather a diverse range of feedback from key organizations that provide services to Hyannis, and to maintain transparency throughout the planning process, a Wayfinding Working Group was established for this effort.

The Wayfinding Working Group was comprised of individuals representing:

- Barnstable Department of Public Works
- Hyannis Public Library
- Steamship Authority
- MassDevelopment
- Cape Cod Regional Transit Authority
- Hy-Line
- Planning Board
- Disability Commission

Two virtual meetings were held with the Working Group with the following goals:

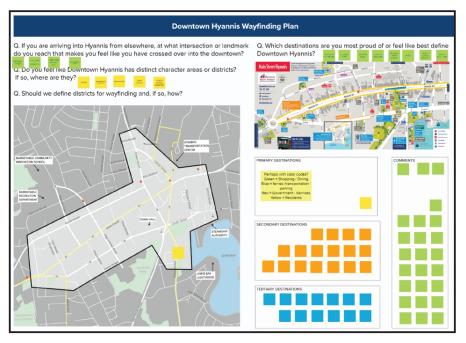

#### MEETING #1- March 31, 2022

- Share the sign inventory and educate about signage typologies
- · Identify priorities for which destinations should be included on signage
- Understand general preferences regarding design components of existing signage in Hyannis

#### MEETING #2- May 11, 2022

- Share the team's process for identifying new signage locations and other details to be included as part of the recommended sign inventory
- Gather comments on early design components of potential signage

The interactive Mural platform was used to aid the March Working Group discussion

Key comments from the Wayfinding Working

More signage is needed beyond the study area to attract people to Downtown

Signs should reinforce each other and create a sense of momentum

There is too much existing signage and a new system should be streamlined

Signs should be simple enough to read quickly

The signs should capture the different energy between Main Street and the waterfront

Brighter (more saturated) colors seen on some existing signage is preferred

Signage should be located near the existing pedestrian "desire lines" to and from Main Street

Preference of marine, nautical, or other symbol representing outdoor lifestyle

# **Targeted Survey**

# Balancing Best Practices and Preferences to Achieve Places

With the understanding that the Town's priorities were to implement new, interim signage in the Downtown as early as summer 2022, the Project Team determined they would solicit further feedback from a targeted group. This group included local business owners and representatives from other local organizations/establishments. This early survey will be used to inform a future, more comprehensive public engagement process as, in time, Hyannis progresses towards a more indepth wayfinding update effort.

The survey was developed with the following goals:

#### May 31 - June 10, 2022

- Better understand the types of destinations of visitors to Hyannis
- Better understand general challenges with navigation that have been raised
- Gather feedback about early design components of proposed signage narrowed down by the Working Group and project team
- Learn about any other specific concerns/preferences relating to

**Seventy** people participated in the survey. Some of the comments and survey data is included in the following pages.

### **Recurring Themes from Survey Comments**

#### **Existing Signage**

Current mix of many signs looks messy and inconsistent A lack of maintenance is impacting the functionality of some signs

Highlights too many destinations, or isn't directing people to destinations that should be highlighted

More signage needed outside of Downtown to direct people

#### **Future Signage**

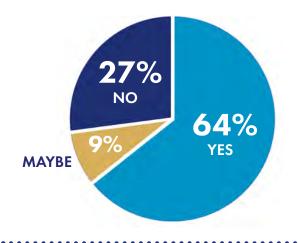

Parking needs to be highlighted as a critical asset to Downtown The signage designs should speak to the Town's history

Terminology needs to be clear and consistent for how destinations are referred to

A more cohesive and streamlined system is needed

#### **Survey Data Summary**

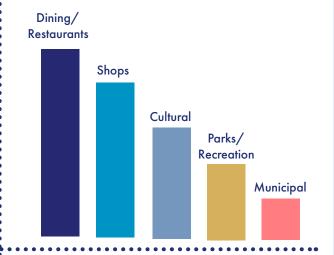

Do you feel like visitors to Downtown Hyannis are more likely to walk to an additional (unplanned) destination if signage indicates how far it is to walk there? (e.g., '200 feet' or '1 minute to the waterfront')?

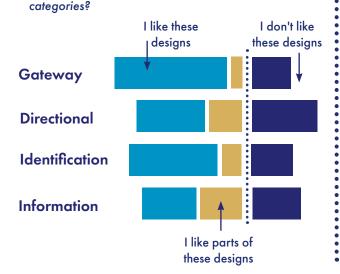

Generally, how would you rank the design of existing

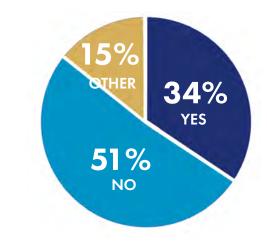

signage in Downtown for each of the 4 sign type

These are the top 5 types of destination that customers/visitors identified as typically visiting when they are in downtown Hyannis.

Have your customers/visitors complained about having difficulty finding you or other locations?

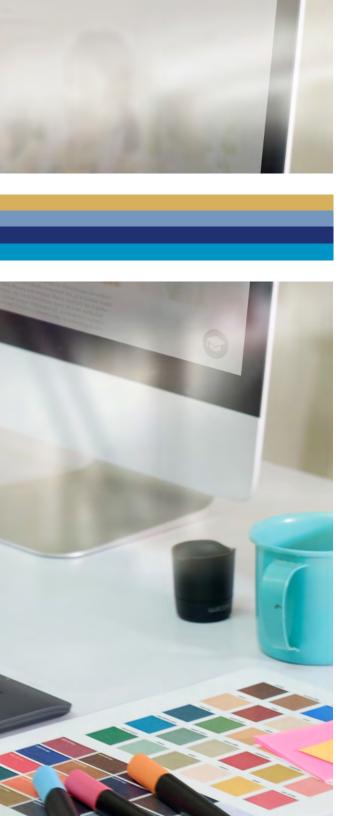

#### Other Ideas Shared

- Lighting elements to increase visibility of some signs in the evening
- Signage to direct people to restrooms from the public parking lots
- Facade maintenance goes hand in hand with signage and creating an inviting atmosphere
- Larger sign lettering is particularly important in Hyannis where there is a larger concentration of elderly people
- Information on signage needs to be accurate and current
- Open-ness to digital signage in appropriate locations
- Sidewalk and crosswalk maintenance needs to be prioritized

# 5

# **Design Options**

Design Development
Design Components
Other Design Considerations

# **Design Development**

# The Core Components of Wayfinding Signage Design

One of the primary tasks for this plan was to develop design options for potential signs. The Town will be pursuing a more comprehensive planning and design process in the future for permanent signage, but a simple process of determining the five core design components of a wayfinding sign was developed for this effort.

- 1. Color
- 2. Motif
- 3. Font
- 4. Size
- 5. Shape

These will be described in greater detail in this section.

## **Design Inspiration-Existing Signage**

The following pages identify some of the features of the town and characteristics that inspired the project team's design component options.

Discussions with the Project Team and Wayfinding Working Group revealed that there weren't many particularly strong attachments to the various design components evident in the existing signage in Downtown today. However, there were more positive associations generally with the brighter-colored, less formal signage styles.

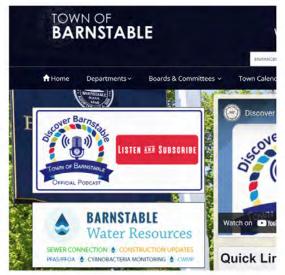

# **Design Inspiration- Community & Seasonality**

### **Design Inspiration- Character & Institutions**

## **Design Components**

### Color

Colors are often used as a tool in wayfinding signage design to help users quickly differentiate between different types of destinations, services, or geographic areas. The examples to the right demonstrate some of the many effective approaches that could be utilized.

In Hyannis, discussions with the Wayfinding Working Group revealed a stronger preference of using color to differentiate between types of destinations, such as 'Municipal Services', 'Cultural', 'Shopping/Dining', and 'Transportation.' Preferences were also identified for the use of bolder colors. With this in mind, and other inspiration found throughout the planning process, a selection of color palettes were developed for potential signage. For each palette, a dominant color is featured, and secondary colors which could potentially represent different destination categories.

### **BEST PRACTICE-**

Principles of Wayfinding Signage

### **Multiple Colors**

If using more than one color, there should be enough contrast between them so that people with varying levels of colorblindness are able to differentiate

### **Functionality**

Deeper colors help white text pop out more and be highly visible

The following color palette options were shared with the Wayfinding Working Group -

### **Option 1- Existing Colors**

**Inspiration:** Keeps consistency with the same colors present in Hyannis signage, now (e.g. HyArts). Colors are bright and saturated, indicated as a preference by the Working Group.

### **Option 2- Historic**

**Inspiration:** Red represents Hyannis as the "heart" of Barnstable. Historic, classic aesthetic. Blues complement existing formal signage (e.g. Bismore Park). Red represents brick facades, and green mimics the color of historic clock

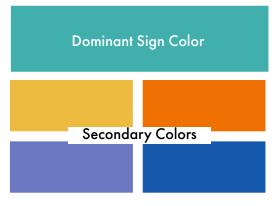

### **Option 3- Shanty Vibe**

**Inspiration:** New colors different from existing signage to stand out and be distinctive. Similar to vibe of Artist Shanty colors. Represents 4 seasons, year-round vitality. Fresh and cheerful.

### **Option 4- Maritime**

**Inspiration:** The Marines/Navy. Association with the water. Patriotic history of Hyannis (JFK).

**Dominant Sign Color** Secondary Colors

### Motif

When wayfinding signage is used to define a district or municipality, a motif/logo is often incorporated to reinforce that a visitor is still within (or heading towards) the boundaries of an area. A motif may use a symbol that is representative of a unique feature of the built or natural environment, may reflect the general character, or reference other local symbology, such as a government seal. There are endless possibilities for how a motif could be integrated, in terms of scale and proportion. A few good examples are shown on this page.

Four early design concepts of motifs were developed for this wayfinding plan effort, and were informed by various sources of input and feedback about the character of Downtown Hyannis, and potential symbols that best represent the area. Some are identified to the right.

The motif options were all designed with a distinct blue as the prominent color for purposes of easier comparison of potential contexts in color.

### What represents Hyannis to you?

- Nautical/ coastal
- Vibrant
- Importance of history but forward-thikning • Hub of the Cape
- Outdoor lifestyle
- Unique balance of Main Street and the waterfront

### **BEST PRACTICE-**

**Principles of Wayfinding** Signage

### **Level of Detail**

Motifs should be simple and not overly detailed so they can be scaled easily to different sizes

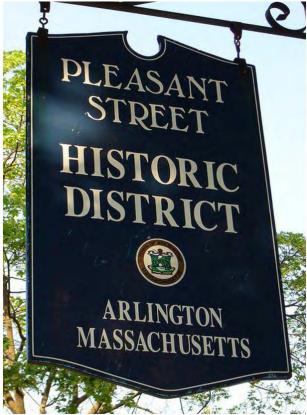

### **Functionality**

The motif should be recognizable from a distance but not distract from the information on the sign

### **Timelessness**

The design should avoid techniques or styles that are distinctly "of the moment" so that it is still appealing years later

The following early concepts were shared with the Wayfinding Working Group (to be further developed by the Town following this plan) -

### **Option 1- Three Masts**

**Inspiration:** Variation/modernization of ship on the Barnstable seal. Nod to history of the town. Emphasis on middle mast with Hyannis as the hub of Cape Cod. 3 masts represent Barnstable, Hyannis, and the downtown area. Flags give a sense of celebration.

### **Option 2- Window to the Cape**

**Inspiration:** Representation of window details seen recurring throughout Main Street; density of windows downtown encourages transparency into activity inside, and a sense of welcoming and vitality to visitors. Spin on the representation of Barnstable as "the hub of the Cape." Stars represent both Main Street and Harbor as core destinations.

### **Option 3- Water Waves**

**Inspiration:** Overlaid water symbol representing downtown and water connection as inextricably linked. Borrows wave theme from jersey barriers previously used. Star from Barnstable seal, indicates downtown as destination.

### **Option 4- Nautical Navigation**

**Inspiration:** Nod to nautical history of town, reminiscent of nautical map compass. 'H'yannis represented as the center of the "compass," the downtown. Similar font as existing gateway sign.

### **Font**

The single most important purpose of a wayfinding sign is to **clearly communicate information.** As such, the font used on signage is one of the most important aspects of its design. Best practice guidance recommends that signage lettering incorporates a sans-serif font for optimal clarity/legibility. There are many options of sans-serif fonts, each with slightly different characteristics.

Several sans-serif fonts were selected for consideration for a potential Downtown Hyannis wayfinding system because they offered some combination of the following characteristics:

- Clean
- Crisp
- Timeless
- Friendly
- Confident
- Flexible (looks good with different motifs)

The fonts were all shown using the same language and against the same color background for comparison purposes.

# Comments about fonts on existing signage Downtown

- Symbols are not a priority. Existing signs have too many symbols.
- Some of the more formal fonts are attractive but may not work for wayfinding purposes.
- HyArts signage fonts are hard to read.

### **BEST PRACTICE-**

Massachusetts
Department of
Transportation
Guidance

Legibility

Sign legibility is a direct function of letter size and spacing. Legibility distance has to be sufficient to give raod users enough time to read and comprehend the sign. Under optimal conditions, a guide sign message can be read and understood in a brief glance. The legibility distance takes into account factors such as inattention, blocking of view by other vehicles, unfavorable weather, poor eyesight, or other causes for delayed or slow reading. Where conditions permit, repetition of guide information on successive signs gives the road user more than one opportunity to obtain the information needed.

(From the MassDOT Manual on Uniform Traffic Control Devices and the Standard Municipal Traffic Code)

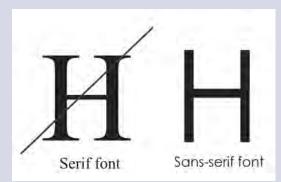

# Principles of Wayfinding Signage Lettering

**Font Family** 

Sans-serif fonts are the most legible (see sample below) as the "feet" and other details of serif fonts can skew or distort lettering as the distance from the sign increases. Unusual or "zany" fonts should not be used but those which are "universal," meaning they can be read quickly and easily by anyone.

**Lettering Size** 

Recommended font size should be 1 inch for every 10 feet of viewing distance (important to consider for signs that are intended for different modes)

The following (non-proprietary) font options were shared with the Wayfinding Working Group -

Option 1 - Bourton Base Drop

DOWNTOWN HYANNIS
PARKING STRAIGHT AHEAD

Option 2- Bebas Neue Pro

## **DOWNTOWN HYANNIS**

Parking straight ahead

**Option 3-** Mangal Pro

**DOWNTOWN HYANNIS**Parking straight ahead

Option 4- Proxima Nova Medium

DOWNTOWN HYANNIS
PARKING STRAIGHT AHEAD

Option 5- Futura PT

**DOWNTOWN HYANNIS**Parking straight ahead

Option 6- ITC Avant Garde Pro Md

DOWNTOWN HYANNIS
Parking straight ahead

### **Shape**

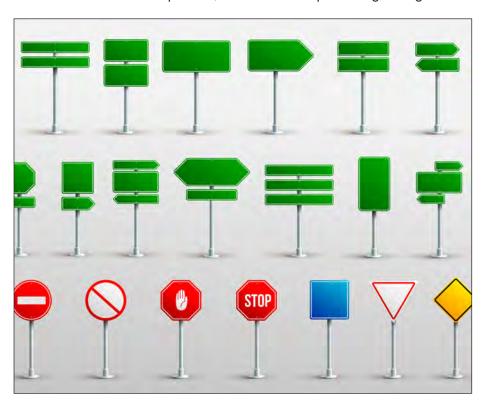

Wayfinding signage systems can sometimes benefit from incorporating a distinct shape to distinguish it from other signage on the road. There are a few things to consider with sign shapes:

### Clarity-

Non-rectangular shapes should not be similar to those of State-owned roadway signage to reduce potential confusion about regulations associated with signs of particular shapes (such as a STOP sign or others shown below).

#### Fabrication-

The complexity of the shape will have an impact on both the ease of the fabrication process, and the cost of producing the sign.

### Size

As demonstrated earlier in this document, the size of wayfinding signage is not one-size-fits-all, and should be determined based on the type of user the sign is intended for (motorist, bicyclist, pedestrian). The size of a sign should also be informed by the speed limit of a road it is placed on (i.e. the speed of travel when a visitor passes a sign), and with consideration of the amount of lettering needed on the sign and best practice for lettering size.

Some of the standard MassDOT Manual on Uniform Traffic Control Devices (MUTCD) road sign sizes are shown below for reference of general practice.

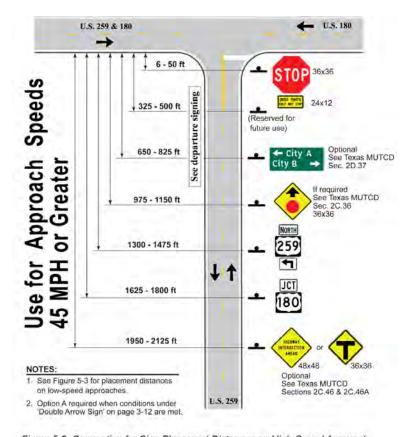

Figure 5-2. Convention for Sign Placement Distances on High-Speed Approach

## **Other Design Considerations**

### **Town Ordinances**

When identifying where a sign might be located, its size, how its installed, and other details, local ordinances should be consulted first to confirm what is permitted in the zoned area of the potential sign. Downtown Hyannis is currently divided into several zoned districts, all of which feature slightly different requirements for signage. In addition, Town of Barnstable ordinances include other requirements (for private property) regarding the relocation or installation of signs, the addition of directional or safety signs, and guidance on determining the size of signs.

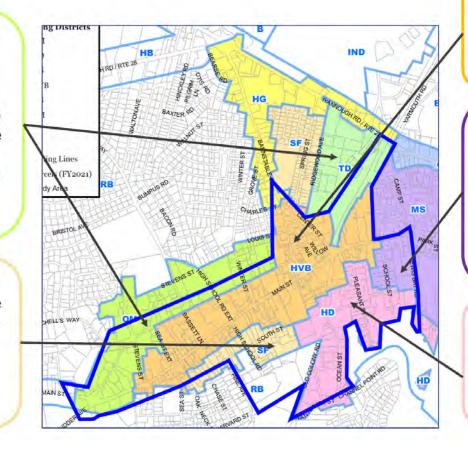

All of these parameters influence the amount of signage present in Hyannis, the level of "sign clutter," and the ease of establishing a streamlined and consistent Downtown signage system.

### OFFICE/MULTIFAMILY +TRANSPORTATION HUB

Freestanding signs no more than 10sf, except the Bldg. Commissioner may grant up to 24sf if size is necessary for the site, is in scale with the building, and does not detract from the visual quality or character of the area.

### RESIDENTIAL DISTRICT

- 1 identification sign no more than 12sf at public entrance to multifamily development
- 1 identification for lodging house or similar no more than 4sf in area

### VILLAGE BUSINESS DISTRICT

 Freestanding signs no more than 12sf in area

# MEDICAL SERVICES DISTRICT

- One sign with name of occupant or other identification of permitted use.
- No more than 12sf in area or 8' above ground

### HARBOR DISTRICT

- Signs no more than 8' high
- Freestanding signs no more than 24sf in area

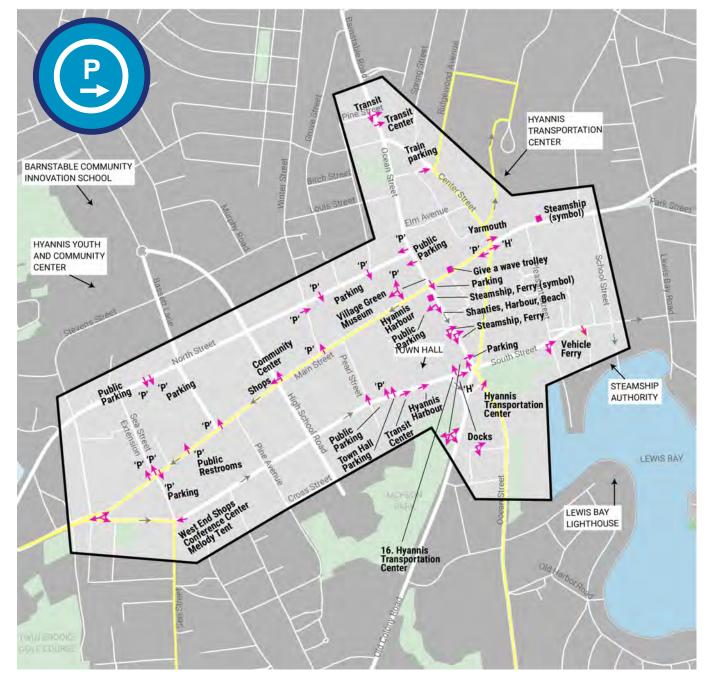

# Recommended Wayfinding System

Process Summary
Recommended Locations
Bringing it all Together
Example User Experience

# Understand the details of existing signage

### **DIRECTIONAL SIGNAGE**

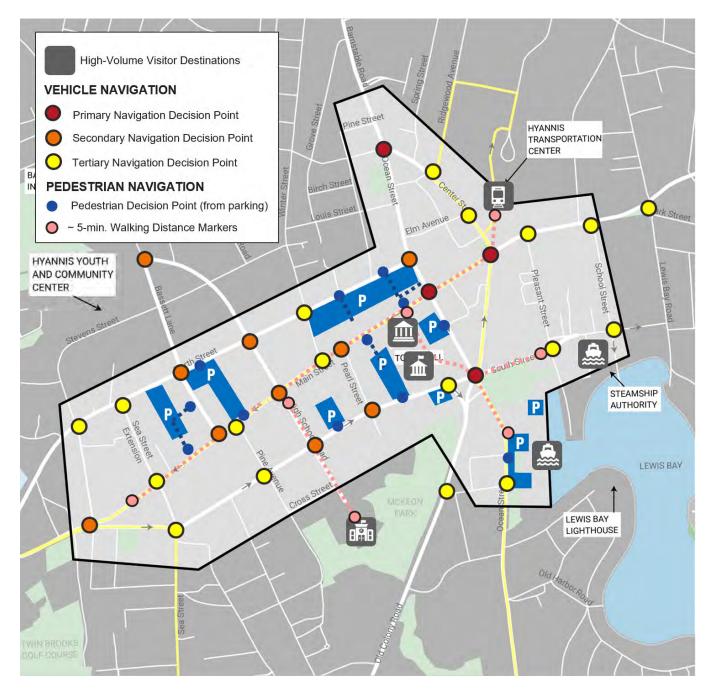

Beyond capturing a general inventory of where signs are located, this process included identifying the language on each of the existing **directional** signs in Downtown, and which way the arrows on the signage were pointing. This was a critical exercise to understand exactly where a driver is being directed to specific destinations, if the destination is being reinforced through sequential signage, and if there are gaps in the directional signage system for where a sign should be guiding a driver to specific destinations.

### **HYANNIS** TRANSPORTATION CENTER BARNSTABLE COMMUNITY Birch Stree INNOVATION SCHOOL Park Street Hyannis Transportation Center - Bus Station HYANNIS YOUTH AND COMMUNITY CENTER JFK Museum Public Library 2 JFK Museum South Street TOWN HALL Welcome to Hyannis Main Street Barnstable Town Hall STEAMSHIP AUTHORITY Guyer Barn HyArts Campus HyArts Arts Campus Welcome to Hyannis Main Street Red Cross Lot LEWIS BAY HyArts Cultural District LEWIS BAY LIGHTHOUSE

# Understand the details of existing signage

### **IDENTIFICATION SIGNAGE**

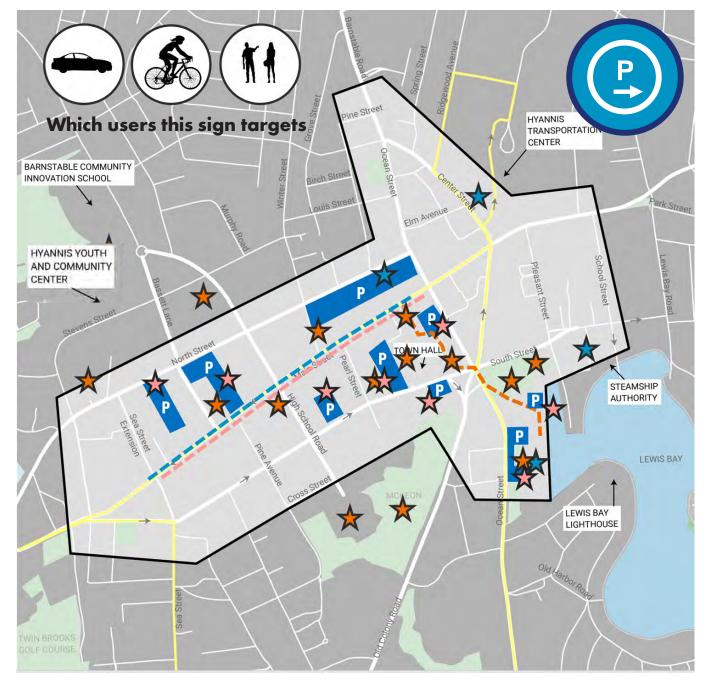

The specific language displayed on the existing **identification** signs in Downtown was important for understanding how destinations are identified on existing signage. There are some instances in downtown where a destination may be identified by a different name on directional signage, for example.

# Identify optimal navigation locations throughout the Downtown

When a motorist is arriving into Downtown Hyannis from various directions, there are areas where signage is generally ideal for capturing a driver at key navigation points. Primary destination navigation points capture drivers with signage at significant intersections that could potentially lead the driver in a different direction than they intended. Secondary navigation points occur at less critical intersections (for example on Main Street, which is only one-way), while tertiary navigation points reinforce destinations at a lesser level.

It was also essential to understand where pedestrians are navigating from, with the understanding that most visitors "become" pedestrians once arriving to Hyannis via a different mode. The map identifies the key access points for pedestrians from the parking facilities in Hyannis. These are shown in relation to the dotted lines which indicate an approximate 5-minute walking distance between the pink markers. This information adds an extra layer of understanding the time associated with navigating between potential destinations, such as the higher-volume destinations identified

# Identify necessary navigation points specific to priority destinations

### **DIRECTIONAL SIGNAGE**

Following several discussions, the Project Team and Wayfinding Working Group identified the locations that should be included on the new directional signage based on a general hierarchy. These are shown in relation to public parking facilities.

### **SIGNIFICANT**

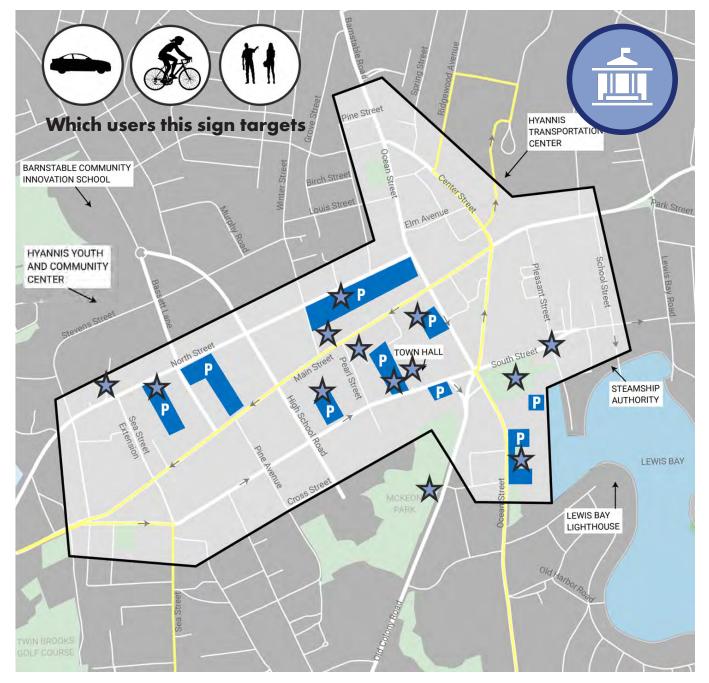

- Main Street
- Transportation Center
- Ferries
- Waterfront/Harbor
- North St. Parking Lot

### NOTABLE \*

- Government Buildings- Town Hall
- Harbor Hawks/McKeon Park
- JFK, Air and Space, Maritime, and Zion Union Heritage Museums
- Artist Shanties/Harbor overlook
- HyArts Campus
- Bismore/Aselton Parks
- Shared Use Path/Walkway to the Sea
- Cape Cod Community College
- Hyannis Youth + Community Center
- John Paul II School

### SUPPORTIVE \*---

- Main Street Shops and Restaurants
- Other Public Parking

# Identify necessary navigation points specific to priority destinations

### **IDENTIFICATION SIGNAGE**

To establish consistency between locations that should be distinctly associated with the town, these are some destinations which might be logical for being identified with a similar type of sign.

### MUNCIPAL/CIVIC

- Town Hall
- Visitors Centers

#### **CULTURAL**

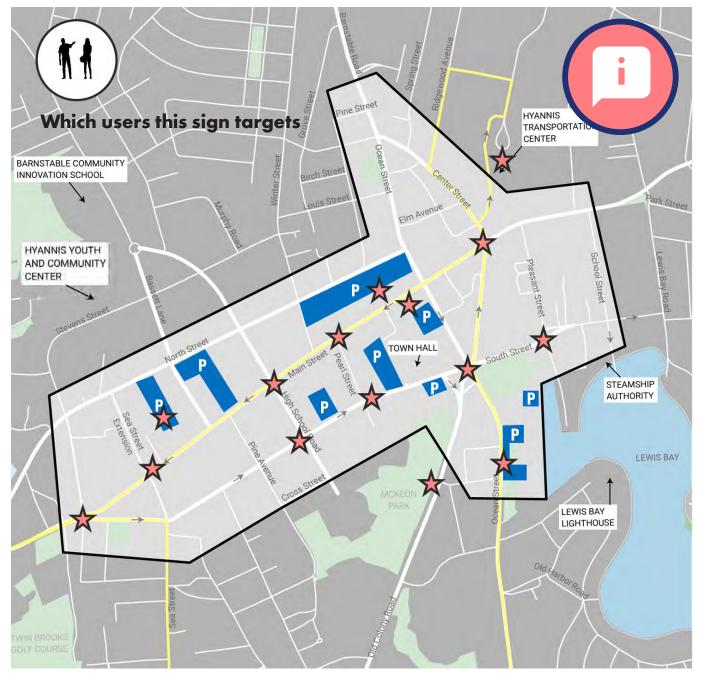

- Library
- Museums

### **PUBLIC PARKING**

Town-owned Public Parking Lots

### **RECREATION**

Parks

### Identify necessary navigation points specific to priority destinations

### **INFORMATION SIGNAGE**

These general areas are optimal for hosting a sign that includes information to pedestrians, such as a downtown map of destinations (including parking), information about transit services, historical facts and information, advertisements for upcoming events, etc.

# Use a sample journey experience to visualize where which types of signage should generally steer a visitor towards a downtown destination

These images depict a very general visualization of how a motorist could better benefit from increased wayfinding signage when arriving into Downtown Hyannis from an example journey between **Point A (Airport Rotary)** and **Point B (North Street Parking Lot)**. The map on the right demonstrates that signage should occur at a regular frequency that reinforces a driver as they arrive closer to their destination.

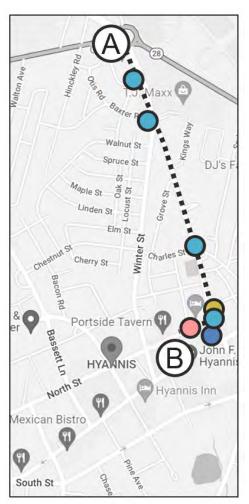

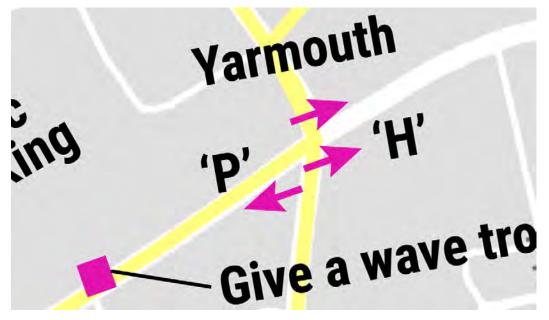

### Intersection-level needs

With an understanding of the general locations needed for new signage across the entire downtown, the next step was to zoom into each location or intersection to understand specific signage needs. The intersection to the left (Main Street and Center Street) is a sample of this process. The downtown destinations that are logical for being included on wayfinding signage at this particular location are identified in bold text below. To direct people to the destinations below who may be arriving to the intersection from different approaches, the direction of the arrows for each destination has been broken down, more specifically.

#### WEST Main Street

- Arrow pointing straight from WB Main St
- Arrow pointing left from NB Old Colony Rd
- Arrow pointing right from SB Old Colony Rd

### Transportation Center

## **Considerations Informing Recommended Locations**

### Safety

One of the goals of signage is to help visitors navigate safely to their intended destination. For vehicles, this requires providing motorists with the information needed in advance of essential turning points so that the driver is not trying to make a last-minute maneuver to adjust their route. For pedestrians, safe navigation can be supported by signage intended for their particular use, such as directing to dedicated trails or access points to parking. However, this is only part of the equation. Sidewalks and other infrastructure supporting pedestrian movement needs to be well-maintained and complete. Crosswalks in particular should be regularly maintained and reinforced by wayfinding signage but also located at a frequency high enough to address the common "desire paths" pedestrians may use in Hyannis to shorten the length of their journey. Some examples of pedestrian desire lines, or crosswalks in need of additional safety enhancements, have been identified below (Source: Google Streetview).

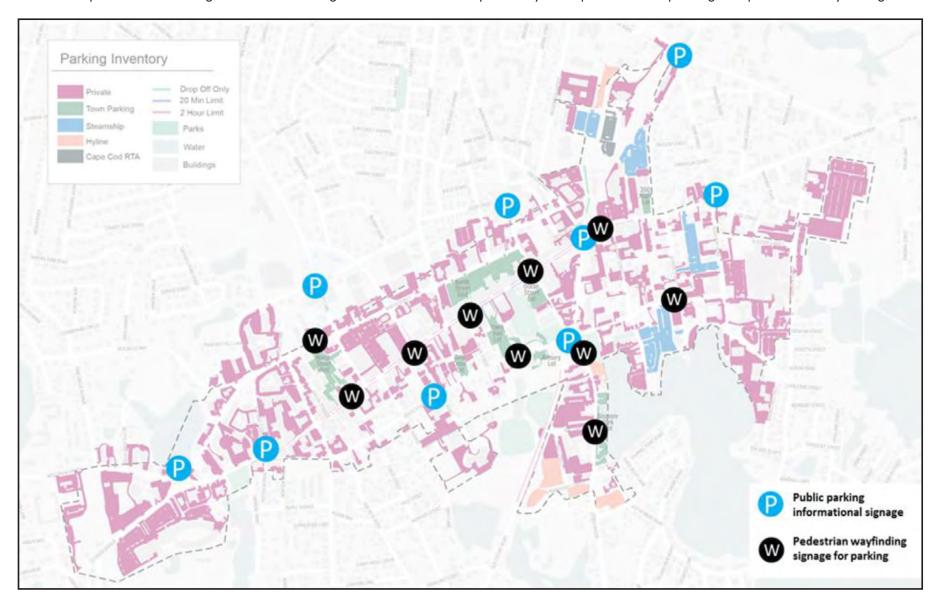

### **Parking**

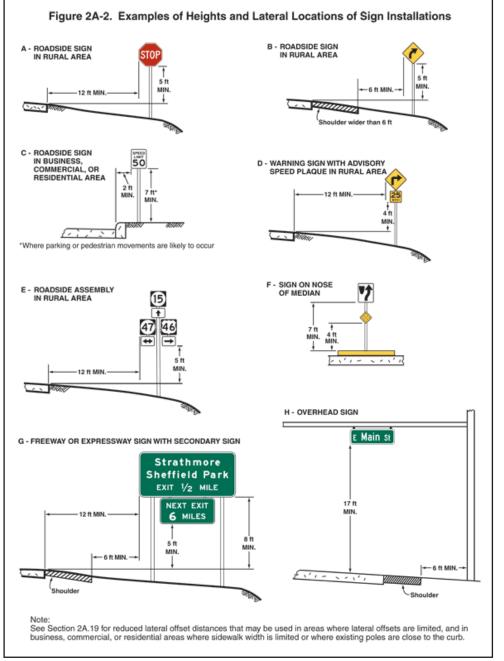

Although this plan's purpose is to investigate and develop a comprehensive wayfinding system from ground zero, the Hyannis Parking Study (2017) was referenced and provided some insight into some of the general areas that have previously been prioritized for parking and pedestrian wayfinding.

### Consider factors relating to sign installation

This plan also takes into account how a sign might be installed, asking questions like- "What fixtures exist now and are they usable?" "What other street furniture is nearby?" "What is the surface of the ground made of, and its condition?" "Are there any slopes to be aware of?"

### Complete all sign-specific information for individual signs throughout Downtown

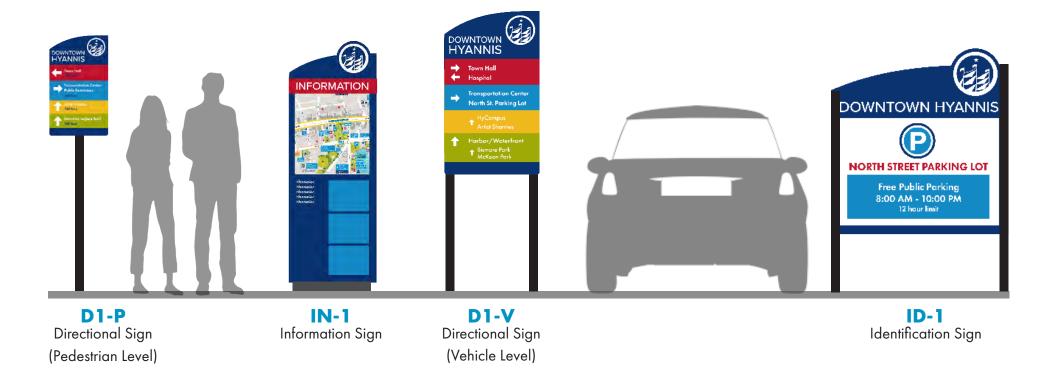

Expanding on the exercise in the previous step, a complete Downtown Hyannis signage inventory matrix was established as one of the key deliverables for this wayfinding plan. The inventory matrix outlines information about each recommended sign in detail, includes specifications that can support ease of preparing requests and orders for potential fabrication, defines the likely method of installation needed for each sign, and other considerations regarding the placement of the signs and nearby existing signage which should be removed. A sample of the complete recommended inventory is shown below. The complete matrix has been included in the report Appendices and will be a valuable tool for the Town to refer to in the future as they pursue the implementation of the wayfinding system in phases.

HYANNIS RECOMMENDED WAYFINDING SIGNAGE INVENTORY MATRIX										
GATEWAY SIGNAGE Typology Fatation Climate

## **Preferred Design Option**

### **Design Suite**

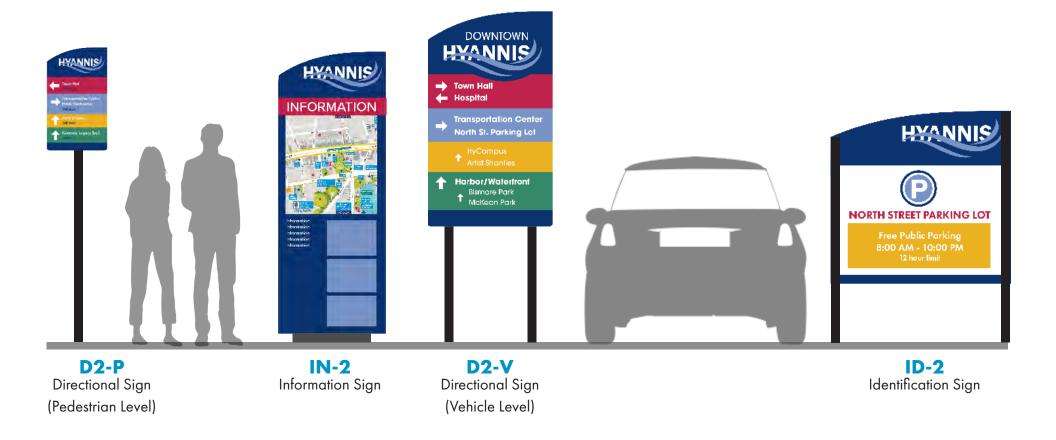

This design incorporates the preferred design options for color palette, motif, and font, and illustrates an example of simple designs for different signage typologies. With the understanding that this design may be developed for interim signage, strictly the directional and informational signs design typologies have been developed for this plan.

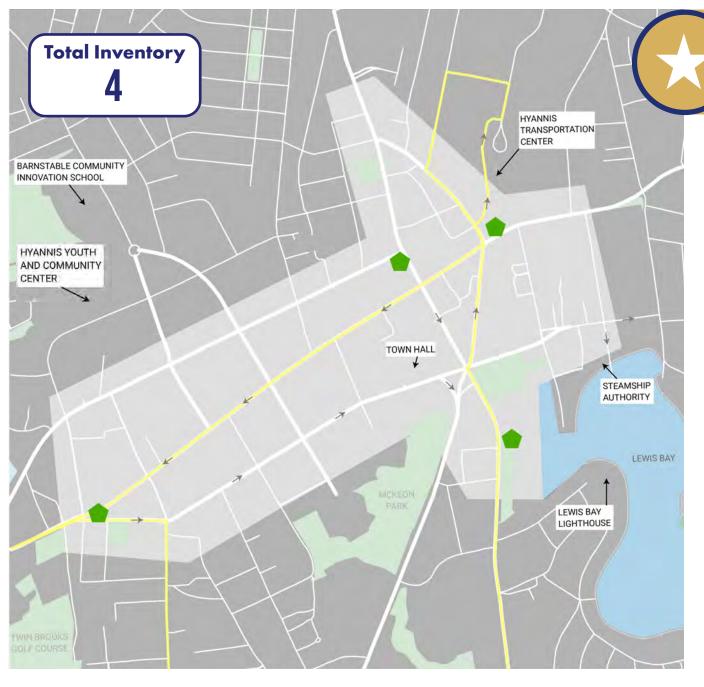

## **Alternate Design Option**

### **Design Suite**

This design incorporates a combination of other top design options considered for color palette, motif, and font, and illustrates an example of simple designs for different signage typologies. With the understanding that this design may only be developed for interim signage, strictly the directional and informational signs design typologies have been developed for this plan.

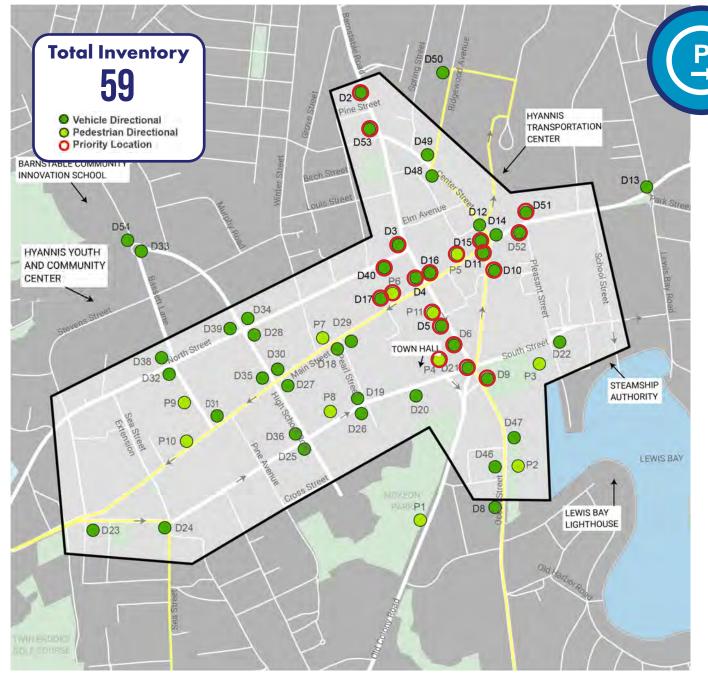

Proposed Signs-Gateway

With consideration that downtown Hyannis only currently features two gateway signs, this plan recommends a gateway sign for visitors arriving crossing the perceived boundaries of downtown.

It was determined that, due to the desire for these signs to be more substantial in design, and likely requiring a higher level of detail and investment, they will likely be pursued through a later planning process.

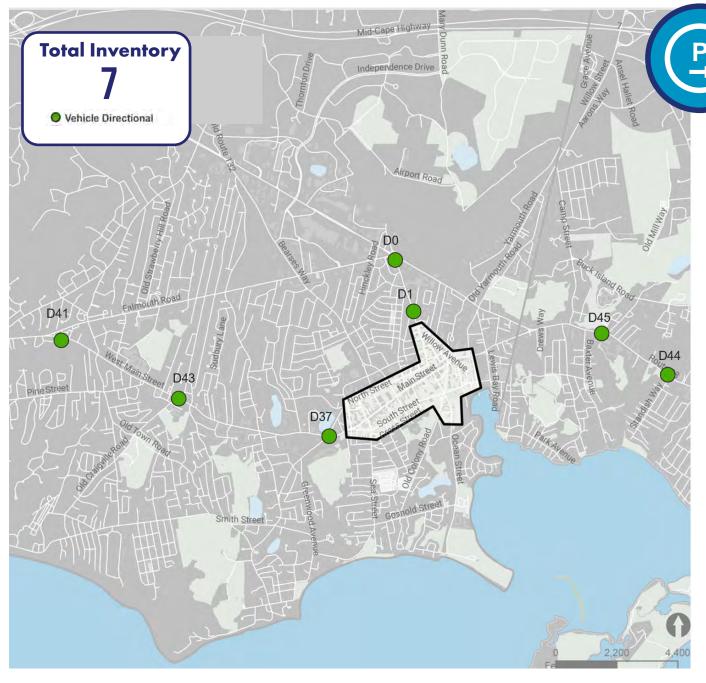

### Downtown Area

Immediately following the adoption of this plan, the Town intends to first focus on implementing new directional signage as a short-term priority.

**Proposed Signs-**

**Directional** 

Based on various factors, including safety, an understanding of where specific destinations need to be reinforced, and addressing areas where the highest volume of visitors are entering the Downtown area, this map recommends the signs which should be prioritized for implementation. Details about these signs, including the language on the signs, recommended placement, and other specifications, can be found in the 'Recommended Inventory Matrix' in the Appendices.

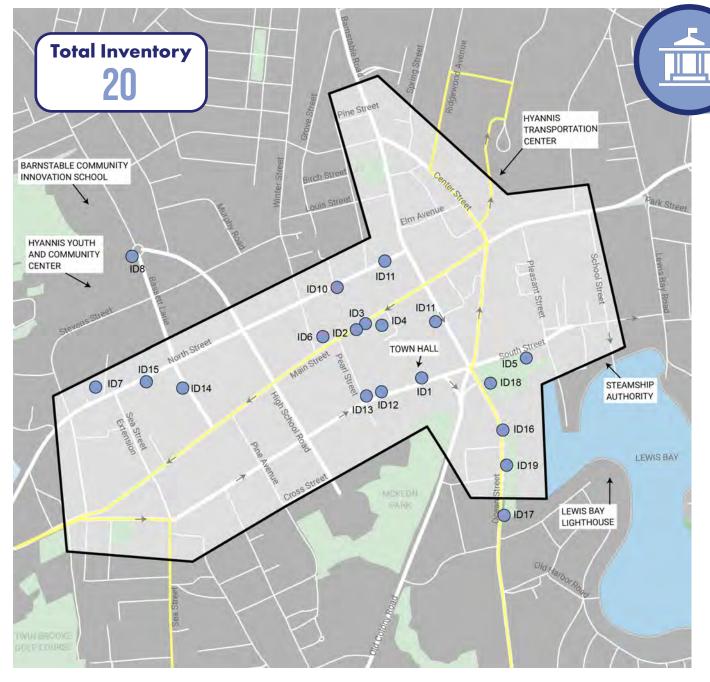

### **Beyond Downtown**

Directional signs beyond the downtown area were identified as a need during the planning process. These locations are optimal for drawing in visitors from regional roadways and reinforcing at regular intervals that a driver is heading in the direction of downtown Hyannis.

**Proposed Signs-**

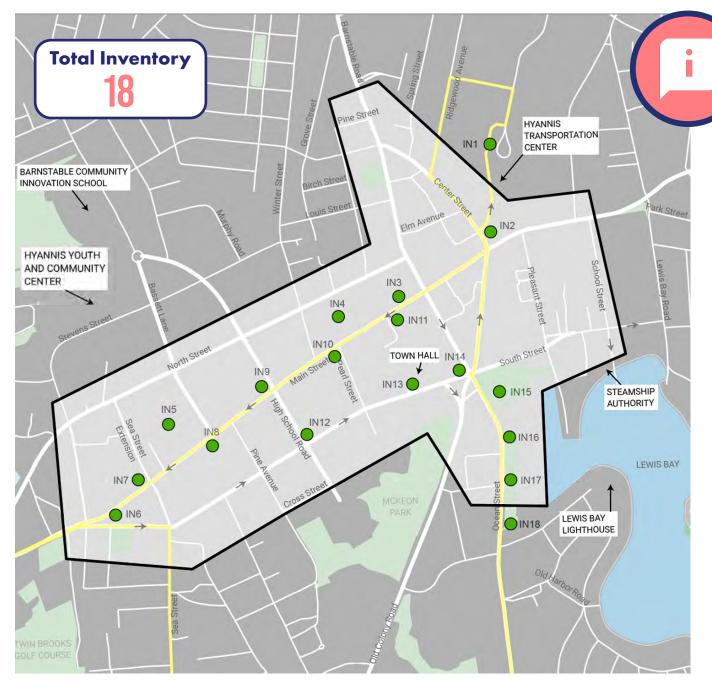

**Directional** 

This plan recommends that all public parking facilities include an identification sign, and are named to align with a consistent system (i.e. parking lots named using the nearest street of landmark).

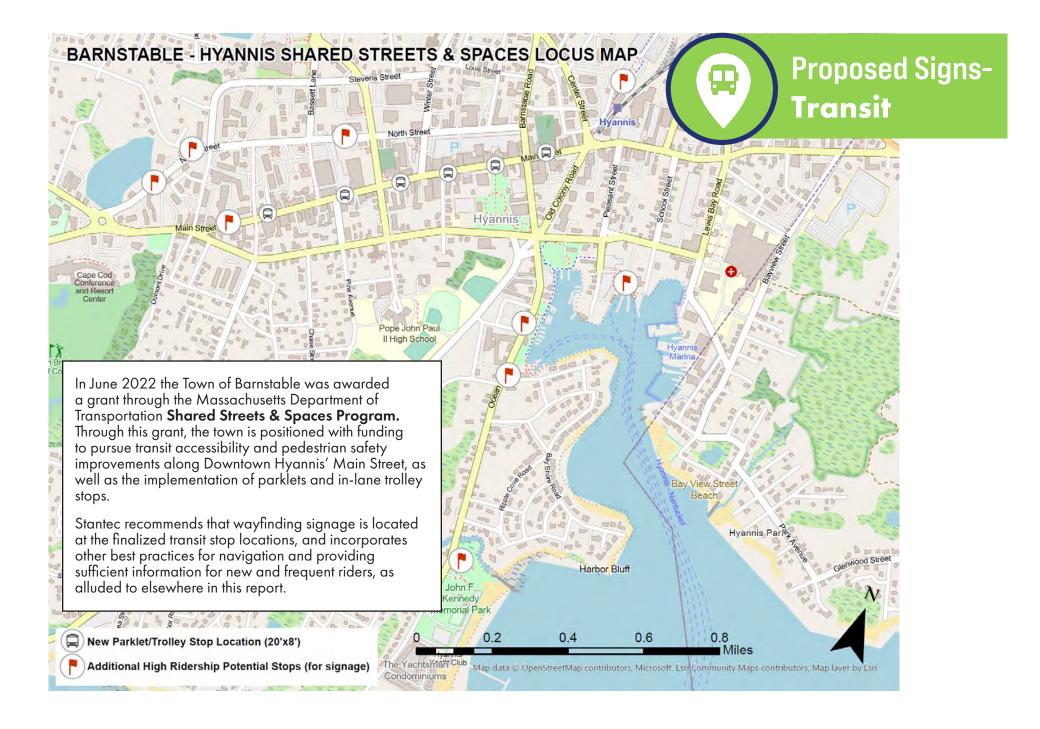

**Proposed Signs-**

**Identification** 

# Proposed Signs-Information

Based on the understanding that pedestrians (including those who use wheelchairs and other assisted mobility devices) are the target user for information signage, these destinations have been selected based on their proximity to key pedestrian navigation points as seen in earlier maps, and also at a frequency that allows for pedestrian interaction, whether a person is able to walk for 5 minutes or longer.

## Sample User Journey Experience (Proposed Signs)

### **Design Option A**

The following renderings illustrate (generally) how the sign typologies recommended as part of Design Option A might be viewed during a journey between Point A (airport rotary) and Point B (North St Parking Lot).

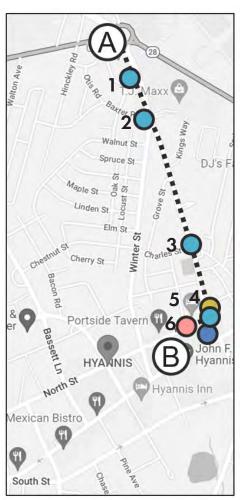

## **Further Considerations for Implementation**

### Essential steps in working towards an effective, long-term downtown wayfinding strategy

In addition to best practice guidance shared throughout this report, the following steps are recommended to the Town of Barnstable to support the short-term implementation of wayfinding signage and to reinforce the effectiveness of a future, longer-term approach:

- Develop a plan like this when pursuing a long-term wayfinding plan
- Secure consensus through further public engagement to progress towards refined signage designs
- Contact sign fabricators to discuss opportunities for customization and flexibility of sign designs
- Identify potential funding sources (taking into consideration the need to fund potential phases)
- Formalize a list and map of final defined sign locations
- Engage DPW and other relevant parties to **check compliance prior to installation** e.g., ADA aisles, height above grade, private business signage visibility, the potential utilization of breakaway bases, etc.
- Consider how to prioritize and **integrate technology** into a longer-term, more user-friendly wayfinding system (e.g., lighting elements, digital travel information, interactive features, etc.)
- **Develop a maintenance plan** to support the long-term evaluation of the wayfinding system, period cleaning and replacements due to wear, etc.)
- Consider how other platforms can support and "speak to" the wayfinding system (e.g., web, social media, printed materials)
- Think of the improved physical components of wayfinding as part of a **broader wayfinding strategy** for Hyannis and the Town of Barnstable (e.g. tourism, restaurants, Steamship, etc.)

# **Public Survey Results**

# **Summary Charts**

Public survey responses as exported from the MS Forms survey platform.

1. When your customers/visitors visit downtown Hyannis, which mode(s) do they usually take?

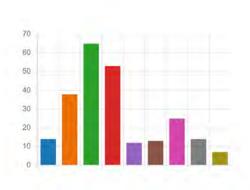

2. Have your customers/visitors complained about having difficulty finding you or other locations?

4. Which of the following types of destinations do your customers/visitors typically visit while in downtown Hyannis? (Select all that apply)

## More Details

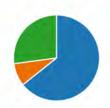

Do you feel like visitors to Downtown Hyannis are more likely to walk to additional (unplanned)
destinations if signage indicates how far it is to walk there? (e.g., '200 feet' or '1 minute to the waterfront')

#### More Details

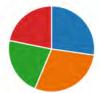

Yes	45
No	6
Maybe	19

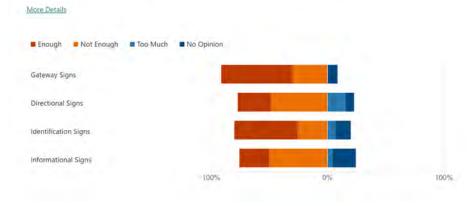

6. The following words have been used to describe Downtown Hyannis during this process. Which words do you feel a strong association with?

#### More Details

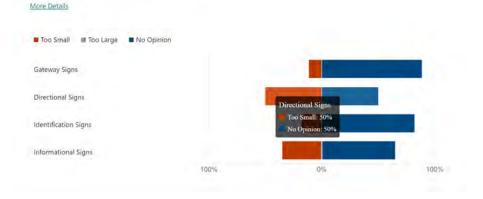

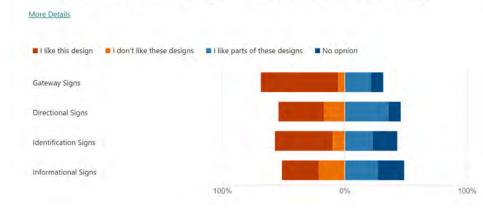

Generally, what are your thoughts about the <u>amount of signage</u> in Downtown for each of the 4 categories?

8. Generally, what is your perception about the <u>sizes of signage and lettering</u> in Downtown for each of the 4 categories?

9. Generally, how would you rank the **design** of existing in Downtown for each of the 4 categories?

## 11. Potential color palettes
